

Water District 1 Report – September 17th, 2025

Natural flow above Blackfoot remains steady at around 5,200 cfs. Overall, diversions in this reach have been gradually declining, though some canals have recently increased or resumed operations after periods of inactivity. Water right priorities have been holding in the 1889–1890 range and are expected to remain there until diversions begin to decrease more significantly. With short-term forecasts calling for continued dry weather, it is unlikely that precipitation will affect priorities in the near term.

Water right priorities on the Snake River above Lorenzo continue to alternate between being split from and connected to the main stem. Diversions in this reach should be aware that the priority may drop to a more senior 1889 level than the Snake River main stem on any given day. Projections for all reaches are posted each weekday at www.waterdistrict1.com.

Below Blackfoot, diversions have dropped significantly over the past week, declining by approximately 1,000 cfs.

Canal managers are encouraged to contact the USBR or Water District 1 at 208-525-7161 to coordinate anticipated changes in diversion rates.

WD1 is projecting a partial water right fill of the following priorities for tomorrow, September 18th:

1889-05-11 Henry's Fork

1889-05-11 Fall River

1885-06-01 Teton River Above Island Ward Canal

1885-10-17 Teton River Lower North Fork

1889-04-15 Snake River Above Lorenzo

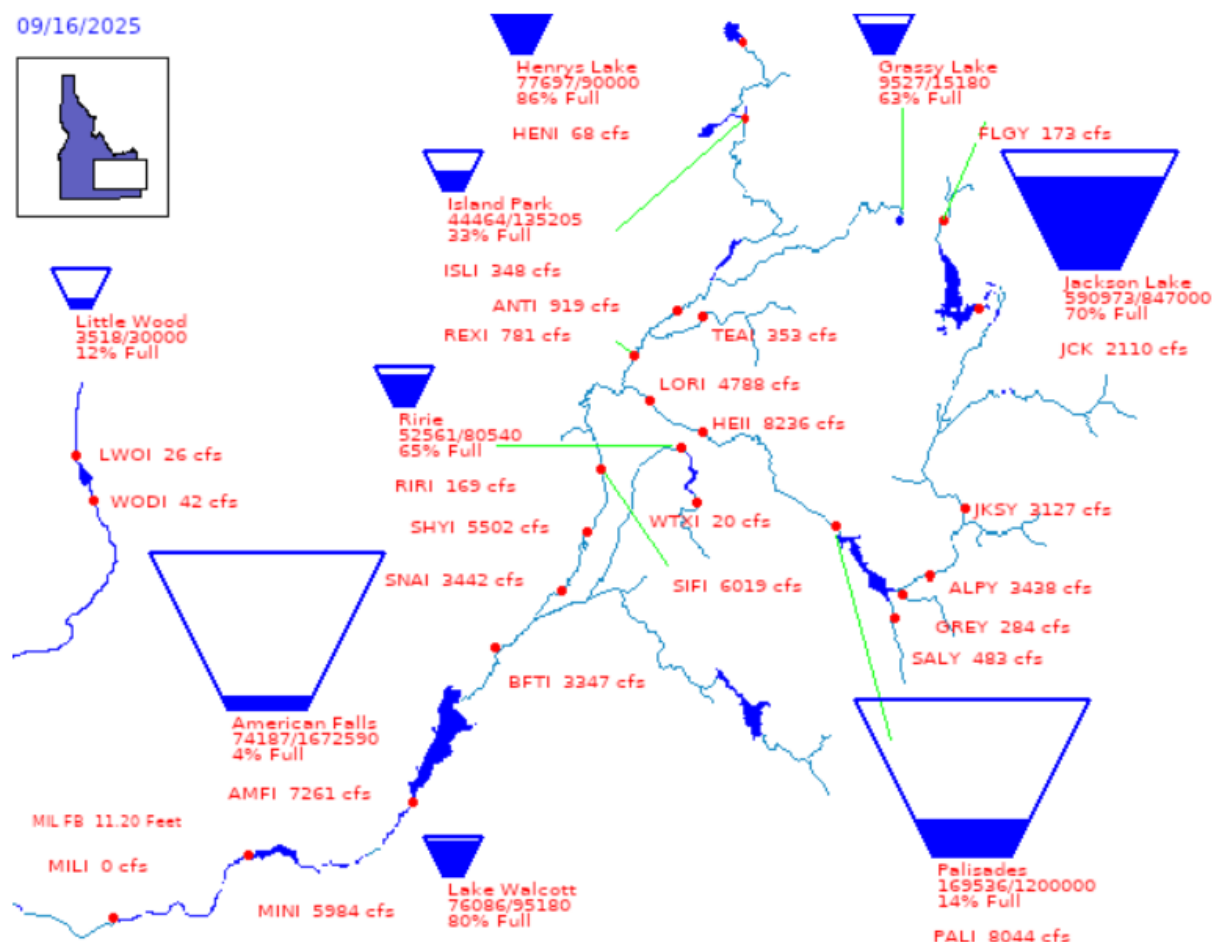

1889-05-11 Snake River Lorenzo to Blackfoot

1900-10-11 Snake River below Blackfoot

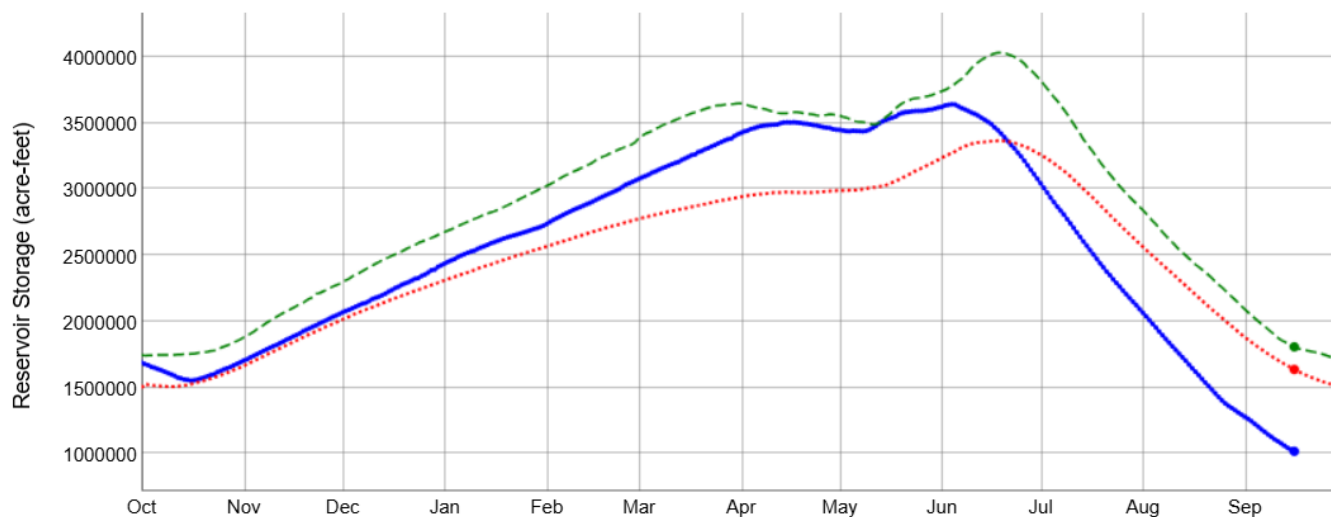

Bureau of Reclamation, Pacific Northwest Region

Major Storage Reservoirs in the Upper Snake River Basin
