

Water District 1 Report – July 8th, 2026

Water right priorities have continued to move to more senior dates over the past week as natural flow above Blackfoot has decreased by approximately 1,000 cfs. Diversions above Blackfoot have remained relatively steady, increasing by approximately 200 cfs. The Teton River has now split into a more senior priority as flows have continued to decrease following the snowmelt-driven peak. The current projected priorities for tomorrow are:

June 1, 1891, for the Snake River above Blackfoot

June 1, 1885, for the Teton River

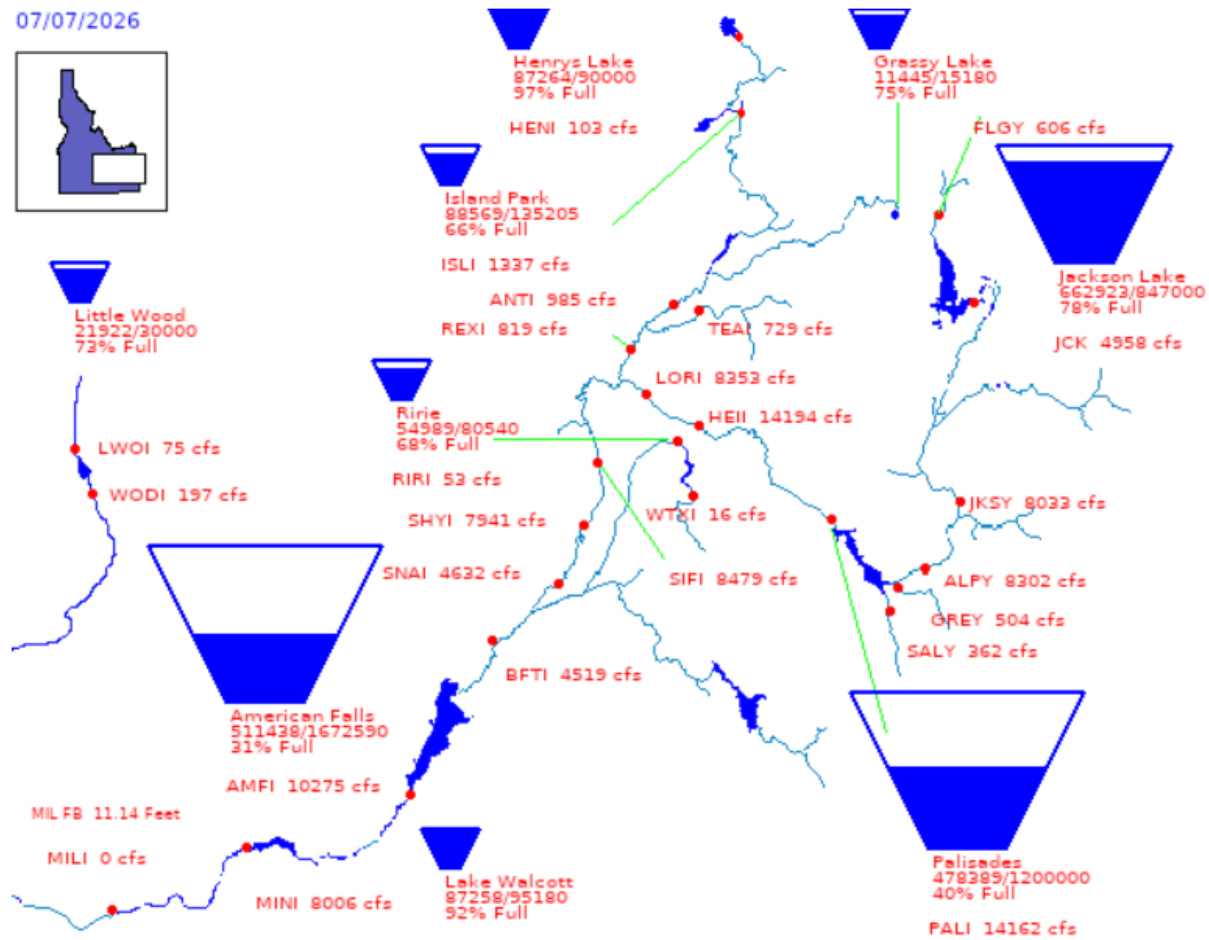

October 11, 1900, for the Snake River below Blackfoot.

Streamflows are now largely beyond the effects of snowmelt runoff, and baseflows are the dominant source of reach gains. A comparison of reach gains from historic years has been compiled, and reach gains are unsurprisingly following a pattern similar to last year. Reach gains above Blackfoot are trending near the bottom 10th percentile of the last 30 years and are comparing closely to the analog year 2013. Reach gains below Blackfoot have rebounded somewhat from the lows observed a couple of weeks ago and are currently trending near the 2021 analog year. A priority comparison is attached to this report using these analog years, showing the reach gains and priorities observed in those years for the upcoming weeks.

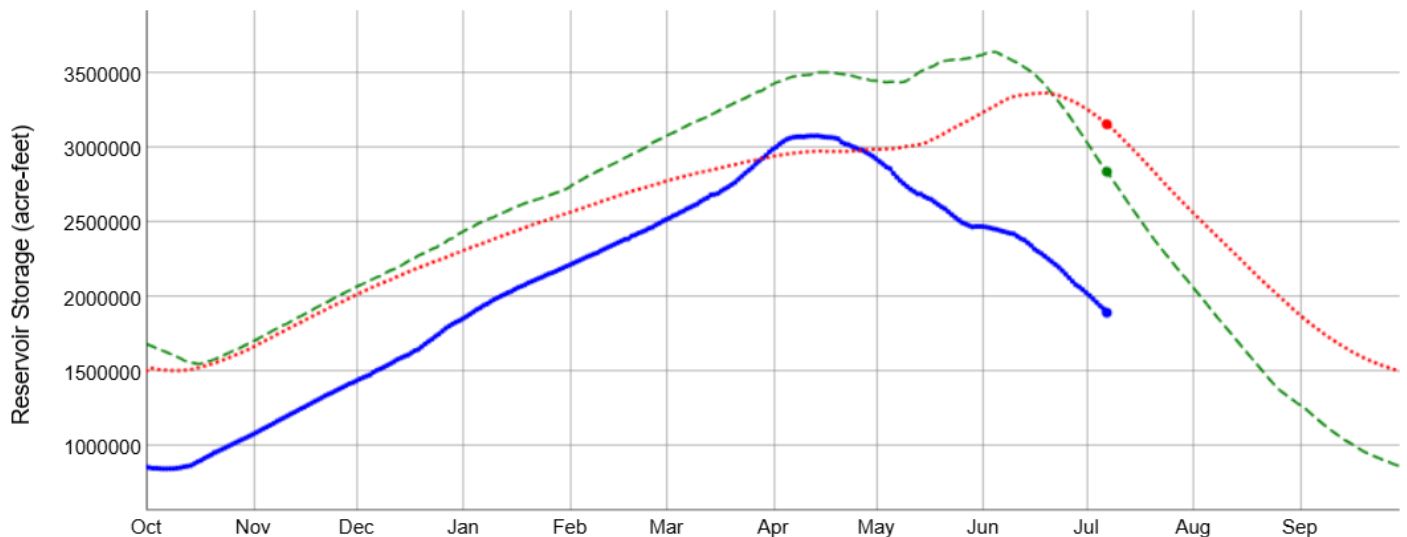

The 2026 storage report has been updated with Palisades Water Users assignments and Fremont Madison Irrigation District assignments. The updated report is available at waterdistrict1.com.

Bureau of Reclamation, Pacific Northwest Region Major Storage Reservoirs in the Upper Snake River Basin

07/07/2026
