

## Water District 1 Report – August 12<sup>th</sup>, 2026

Following the scattered monsoonal precipitation received across the basin more than a week ago, hot and dry conditions returned. Reach gains above Blackfoot have declined sharply since that time. Over the past two weeks, natural flow has decreased by an average of approximately 225 cfs per day, while diversions have remained relatively steady. As a result, water-right priorities have moved to more senior dates, generally shifting from the 1890–1891 range to the 1888–1889 range.

From a historical perspective, natural flow conditions above Blackfoot remain very poor, consistently ranking near or below the 10th percentile of the past 30 years. Only 2001 and 2007 were clearly lower during comparable periods, and conditions may be approaching those levels. Water District 1 is currently using 2025 as the analog year in the attached priority comparison and will continue monitoring whether conditions remain aligned with that year or begin trending toward other analogs.

Below Blackfoot, natural flow has also remained low over the past several weeks, generally ranging between the 10th and 30th percentiles of the past 30 years. Water District 1 has changed the analog year for this reach to 2004, as reach gains over the past month have more closely resembled conditions observed that year. Diversions below Blackfoot have remained relatively constant over the past two weeks.

The projected water-right priorities for tomorrow are:

|----------------------------------------|-------------------------|
| Falls River:                           | <b>August 13, 1888</b>  |
| Henry's Fork:                          | <b>August 13, 1888</b>  |
| Teton River:                           | <b>May 22, 1884</b>     |
| Teton Lower North Fork:                | <b>June 1, 1885</b>     |
| Snake River above Lorenzo:             | <b>August 13, 1888</b>  |
| Snake River from Lorenzo to Blackfoot: | <b>August 13, 1888</b>  |
| Snake River below Blackfoot:           | <b>October 11, 1900</b> |

The physical reservoir system continues to draft rapidly as natural flow supplies remain low and crop water demand persists. Approximately 25,000 acre-feet of storage is currently being used each day by diversions. Physical system storage levels are tracking near several of the lowest water years experienced during the past 30 years. The year 2003 is being used as an analog to help inform operations and provide a benchmark for potential end of season conditions. The 2003 season resulted in the lowest carryover of the past 30 years, and the reservoir system did not refill the following year. A comparison of carryover years is attached for perspective.

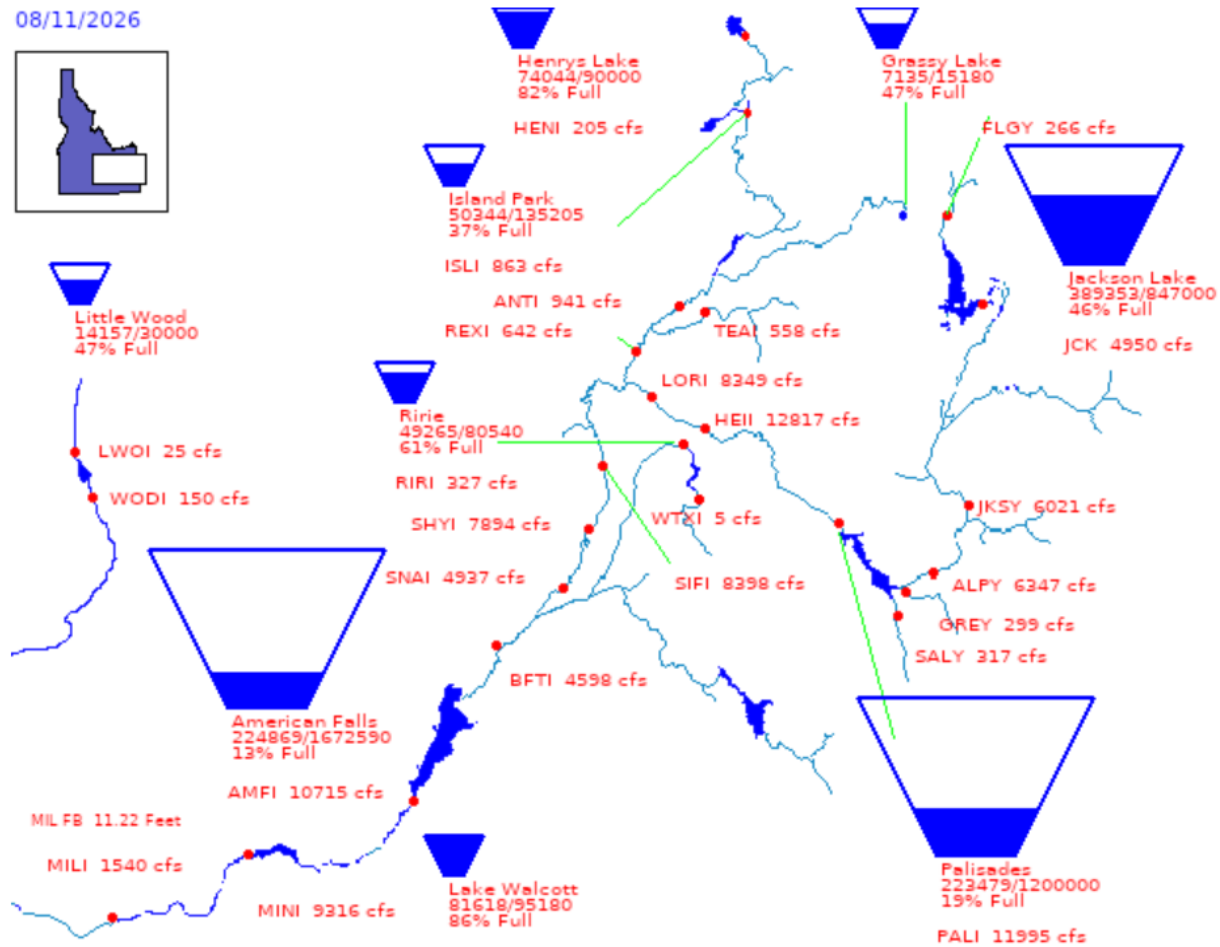

Increased drafting from Ririe Reservoir began Monday, August 10, at approximately 700 acre-feet per day. These releases are being used to help manage the overall system draft and facilitate irrigation storage deliveries.

Combined storage deliveries below Milner for Idaho Power's storage allocation and the Idaho Water Resource Board's Swan Falls mitigation delivery are currently running at just over 1,500 cfs. These deliveries are scheduled to end Monday, August 17, once both sources have been fully delivered.
